

2m Trench Cover, Yellow, 500kg Load

Product SKU:	1122153
Colour:	Yellow
Width:	800mm
Thickness:	4mm
Length:	2m

This Trench Cover is a robust and highly functional solution designed to help to ensure safety and durability for pedestrian and light vehicle traffic. This cover is engineered to meet the demands of high-traffic areas while providing a slip-resistant surface and reinforced construction to handle substantial loads. Whether used on construction sites, public walkways, or in industrial environments,

this trench cover is built to deliver reliable performance and safety.

Key Features:

Reinforced Load Capacity:

The trench cover features a steel bar reinforcement on the backside, which significantly enhances its load capacity. This reinforcement ensures that the cover can withstand heavy loads without compromising its structural integrity. With a maximum load weight capacity of approximately 500kg, this cover is designed to handle both vehicles and pedestrian traffic.

Slip-Resistant Surface:

The surface of the trench cover is designed to be slip-resistant, providing traction for both pedestrian and vehicular traffic. This feature is crucial for helping to prevent accidents and ensuring safe movement across the cover. The slip-resistant texture enhances grip, reducing the risk of slips and falls, especially in wet or challenging conditions.

Durable Construction:

Manufactured from UV-stabilized polyurethane, the trench cover is built to withstand various weather conditions and environmental factors. Polyurethane is known for its durability and resistance to UV rays, rain, and temperature fluctuations. This material ensures that the trench cover remains in excellent condition even with prolonged exposure to outdoor elements, making it a cost-effective solution for long-term applications.

Versatile Applications:

The Trench Cover is suitable for a wide range of applications, including construction sites, public roadways, and industrial settings. It is particularly useful in areas where trenches need to be covered to allow safe passage for pedestrians and light vehicles while maintaining access to underground utilities or infrastructure. Its combination of a 500kg load capacity, slip-resistant surface, and durability makes it a versatile choice for various operational needs.
